

OS

...

Practice (4)

## Practice (4)

What you should remember is:

- `os.path.split('path')`: to split the base name and the directory name.
- `os.path.splitext('path')`: to split the extension from the path.
- `os.path.join('path1', 'path2')`: to combine path1 and path2.
- `os.path.exists('path')`: to confirm that the path exist.
- `os.path.isfile('path')`: to confirm that the path is a path of a file.
- `os.path.isdir('path')`: to confirm that the path is a path of a dir.
- `os.path.commonpath(['path1', 'path2', ...etc])`: to get the common

## Practice (4)

path between the list of paths.

- `os.system('command')`: to execute the command.
