

# Classes

Creating a class

# Creating a class

What's a class:

You can consider a class as a form/model/template, that we use to create other objects, in an other way, a class helps to structure the form of the objects.

The objects created from the same class have the same type.

# Creating a class

In this lecture we will see:

- Creating a class.
- The `__init__` method.
- Attributes and methods.
- Addition for python2.
