

Lists

Creating a list and accessing to its elements

Creating a list and accessing to its elements

What you should remember is:

- creating a list: `list_name = [f_e, s_e, t_e, ...]`
- accessing to an element in a list: `list_name[element's_num]`
- Counting in lists starts from **0** and **not 1**.
- `list_name[-1]` returns the value of the last element.
