BeautifulSoup

The 'find' method

The 'find' method

What you should remember is:

- the find method helps us to pull a tag with a specific arguments that we pass.
- syntax: bs_tag = soup.find('tag', *args).
- If we don't pass any arguments, the find method will return the first 'tag'.
- To find all the tags: bs_tags = soup.find_all('tag', *args).
