Exceptions

try - multi-except statement

try - multi-except statement:

What you should remember is:

- We can specify the exceptions that we want to handle by writing them, for example:
    - except ZeroDivisionError
    - except IndexError
    - except TypeError
    - except Exception
    - ...Etc

try - multi-except statement:

- To execute an Exception manually: raise ExceptionName.
- We can create an object out of an Exception class using the keyword 'as'.
